

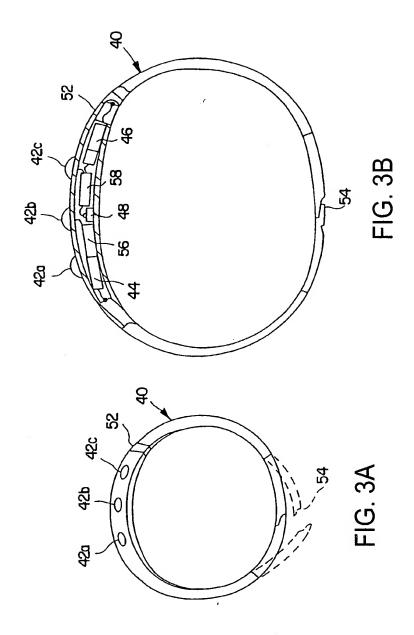

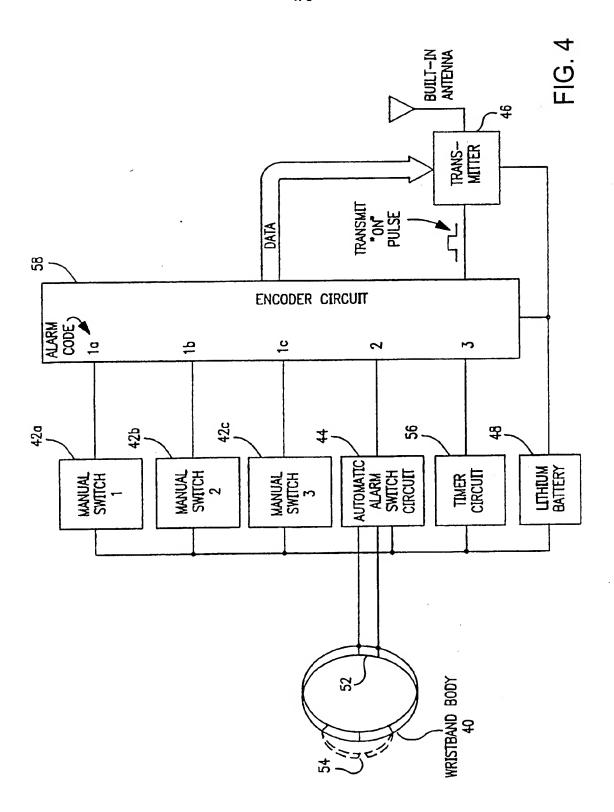

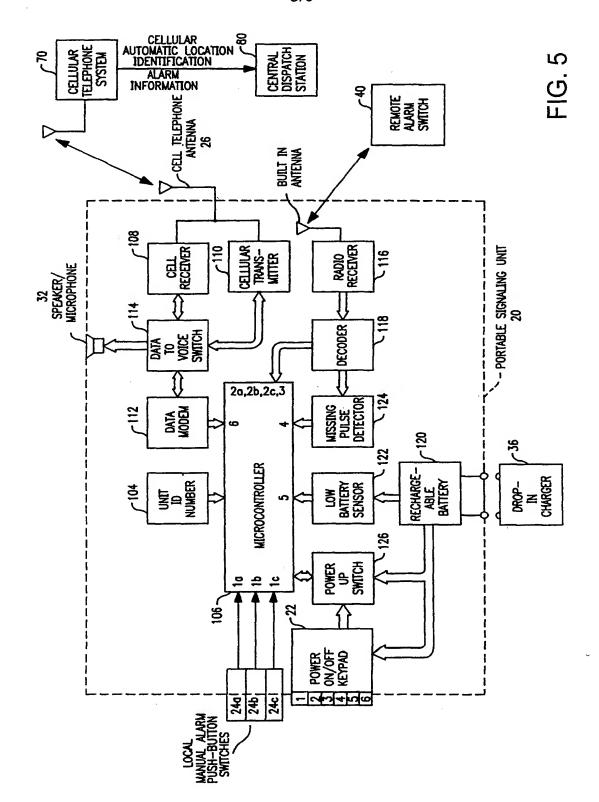

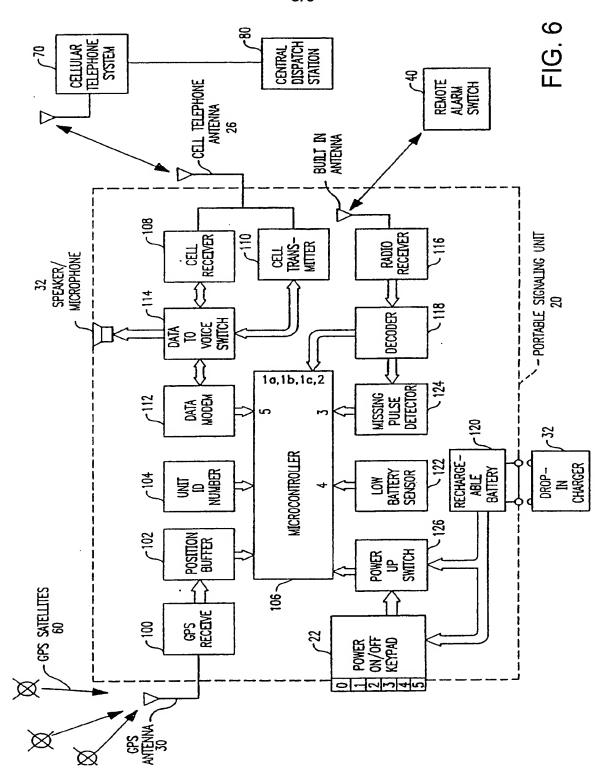

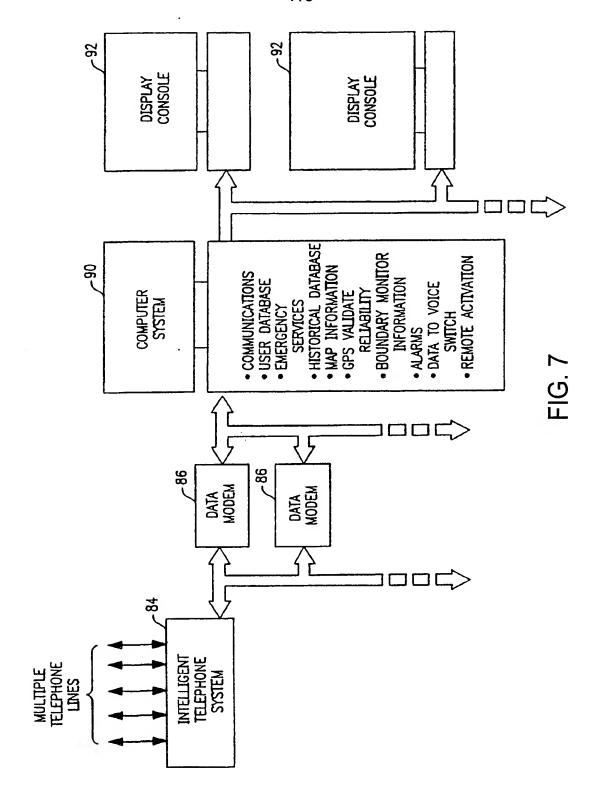

FIG. 2

		Inforr verifie stored	Information received, verified, displayed and stored at central dispatch station	ived, 1 and Jispatch
Situation	Activation Method	Unit Serial/ID Number	Alarm Code	Location Cordin— ates
INITATED FROM PROTABLE SIGNALING UNIT:				
1. Person 50 is able to alert the central dispatch station 80 by depressing one of several manual alarm push—button switches on portable signaling unit 20 relating to various health conditions or a threat to personal sofety.	Manual alarm push—button switch 24a, 24b, 24c, etc. is depressed on portable signaling unit 20 which activates portable signaling unit 20 to alert central dispatch station 80.	XXXXXXX	<u>≼ಥೆറ</u> ೆ ਜ਼	XXXXXX YYYYYY ZZZZZ
2. Person 50 is able to alert the central dispatch station 80 by depressing one of several manual alarm push—button switches on portable signaling unit 20 relating to various health conditions or a threat to personal safety.	Manual alarm push—button switch 42a, 42b, 42c, etc. is depressed on remote alarm switch unit 40. Radio transmitter 46 sends a unique code to receiver 116, decoded by decoder 118, which activates signaling unit 20 to alert central dispatch station 80.	XXXXXXX	నజిన <u>చ</u>	XX.XXX YY.YYY 27.77
3. remote alarm switch unit 40 is forcibly removed from person 50 before he or she is able to summon help.	Automatic alarm switch circuit 44 is operated when remote alarm switch ciasp is opened, or wristband is cut or broken.  3. remote alarm switch unit 40 is forcibly Radio transmitter 46 sends a unique code to receiver 116, removed from person 50 before he or she is/decoded by decoder circuit 118, which then activates able to summon help. FIG. 8A

4. Portable signaling unit 20 is forcibly removed from person 50 before he or she is able to summon help.	Portable signaling unit 20 fails to receive a periodically transmitted signal from remote alarm switch 40 due to separation distance. A uniquely coded signal is normally detected at receiver 116 and decoded by decoder 118.  If missing pulse detector 124 fails to be reset by the periodic signaling unit 20 is forcibly signal, then microcontroller 106 senses this as an alarm removed from person 50 before he or she is state. Signaling unit 20 is then activated to alert central dispatch station 80.	XXXXXX	4	XX XXXX YY YY
5. Low battery condition is sensed in portable signaling unit 20.	Low battery sensor circuit 122 activates portable signaling device 20 to alert the central dispatch center 80 that a low battery condition exists. There will be enough battery power remaining for limited operation.	XXXXXXX	· v	XXXXXX MY YMY ZZZZ
INITATED FROM CENTRAL DISPATCH STATION:				
6. Current location of person is desired. Information is requested by subscriber on an as needed basis such as locating a lost person.	6. Current location of person is desired. Information is requested by subscriber on an Central dispatch station 80 activates portable signaling unit as needed basis such as locating a lost determine and display position of portable signaling unit 20.	XXXXXXX	9	XXXXXX YYYYY ZZZZ
7. Person is to be monitored for compliance within preset boundary.	Central dispatch station 80 activates partable signaling unit 20 via cellular telephone system 70 at predetermened time intervals to track position of portable signaling unit 20 within present boundaries. Alarm is activated at the central dispatch station if boundary limits are violated.	XXXXXX	9	XX, XXX YYYYY ZZZZ
8. Spat check to insure system is working and to compile historical data.	Central dispatch station activates portable signaling unit 20 via cellular telephone system 70 at predetermined time intervals. Central dispatch station 80 alarm is activated if there is no response or invalid data is received.	XXXXXX	9	XXXXXX YYYYYY ZZZZ
